

A qr code matching app for Material pickings

Work flow

1. A worker pick a material and scan its qr code and input its qty by this app.
2. If its qr code matches both the QR code and the qty contained in the master data, the app displays “OK”. if not, it displays “NG”.
3. She repeats this process over and over for all the items in the list.
4. If all the items are “OK”, the app displays “Completed”. She pushes the button, this app sends data to its server.
